

Industrial asset management (IAM) is a system used to track and maintain industrial assets such as machines, tools, and equipment. IAM systems are used in the manufacturing sector and other industrial settings to help companies keep track of their assets and plan for their future needs for meeting customer demand.

Nevertheless, the assets are reallocated to other industrial firms that maintain customer-supplier relations with the seller and re-main connected through joint ventures. As such, our findings indicate that divestitures of pollutive assets convey various benefits to the sellers without having to give up their

Industrial asset tracking is a comprehensive solution that can enhance cost efficiency, asset utilization, and management by monitoring and maintaining assets through advanced software and durable tagging systems. Implementing this effectively involves choosing scalable software, investing in high-quality asset tags, conducting thorough ...
