

What is happening in Liberia's energy sector?

The update highlights key advancements in Liberia's energy sector, including notable progress in power generation and the expansion of energy access. However, despite these gains, the country faces significant power shortages, calling for substantial investments to achieve reliable, affordable, and sustainable energy access for all Liberians.

Why is reliable energy important in Liberia?

The report offers a comprehensive analysis of recent economic developments in Liberia, underscoring the crucial role of reliable energy in fostering sustainable growth. The update highlights key advancements in Liberia's energy sector, including notable progress in power generation and the expansion of energy access.

Why is Liberia a net importer of petroleum products?

Liberia is a net importer of petroleum products, relying on imports to meet its energy needs. It has a high energy density and is convenient for transportation and electricity generation. Reliance on imported fuels, vulnerability to price fluctuations, and contribution to greenhouse gas emissions.

How can Liberia improve energy security?

One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation. By harnessing these indigenous and sustainable energy resources, Liberia can decrease its reliance on imported fuels and enhance its energy security.

How will Liberia achieve universal access to electricity by 2030?

The country will need to invest heavily in energy infrastructure to achieve universal access to electricity by 2030. The primary energy sources in Liberia are traditional biomass fuels such as firewood and charcoal, which account for more than 80% of the country's total energy consumption [5,12,13].

Is electricity available in Liberia?

In Liberia, the availability of grid-connected electricity is limited, which has one of the world's lowest electricity consumption rates with $\lt; 50\text{ kWh}$ per capita per year. As shown in Fig. 8, it was estimated that only about 28% of the population has access to modern electricity.
