What is the potential for solar energy in Palestine?

There is high potential for solar energy in the Palestine, with a daily average solar radiation of 5.4 kWh/m<sup>2</sup> which should encourage its use for mass applications like cooking, industrial and domestic heating, water pumping, rural electrification, desalination etc.

How many homes in Palestine use solar energy heaters?

Over half of all households in Palestine utilise solar energy heaters, although only 3% of houses depend on it as their main source. A 710kw photovoltaic plant was commissioned in September, 2014 in the vicinity of Jericho; it is the largest plant in Palestine to date.

Is Palestine a good place to invest in solar energy?

Palestine has some of the highest rate of solar water heating in the region, and there are a number of solar power projects. A number of issues confront renewable energy development; a lack of national infrastructure and the limited regulatory framework of the Oslo Accords are both barriers to investment.

What is the energy problem in Palestine?

The energy problem in Palestine is one of many issues that affect the social and economic conditions of the Palestinian people. The fact that most of the energy is imported at relatively high prices places more financial burdens on poor and marginalized people.

What is solar water heating in Palestine?

Palestine receives about 3,000 hours of sunshine per year and has an average solar radiation of 5.4 kWh/m<sup>2</sup>. Domestic solar water heating (SWH) is widely used in Palestine where almost 70% of houses and apartments have such systems. In fact, Palestine is one of the leading countries in the field of SWH for domestic purpose.

How can Palestine reduce its reliance on imported energy carriers?

Palestine can reduce reliance on imported energy carriers by deployment of clean energy systems, especially solar, geothermal and biomass. Palestinian areas has large alternative energy potential which can be harnessed by a futuristic energy policy, large-scale investments and strategic assistance from neighbouring countries like Jordan and Egypt.

For example, the Deir Abu Mishal 8.25 MW solar plant, the largest on-grid utility-scale solar installation in Palestine, supplies electricity to four villages northwest of Ramallah, ensuring that residents benefit from sustainable and cost-effective energy.

There is high potential for solar energy in the Palestine, with a daily average solar radiation of 5.4 kWh/m<sup>2</sup> which should encourage its use for mass applications like cooking, industrial and domestic heating, water ...

There is high potential for solar energy in the Palestine, with a daily average solar radiation of 5.4 kWh/m<sup>2</sup> which should encourage its use for mass applications like cooking, industrial and domestic heating, water pumping, rural electrification, desalination etc.

The Palestinian Solar Initiative: The first phase will include an unprecedented initiative to spread the concepts of solar energy which is called the Palestinian Solar Initiative (PSI). This initiative ...

Renewable energy in Palestine is a small but significant component of the national energy mix, accounting for 1.4% of energy produced in 2012. [1] Palestine has some of the highest rate of solar water heating in the region, [2] and there are a number of solar power projects.

The Palestinian territory has a high potential for solar power generation, as it receives around 3,000 hours of sunshine per year. As a result, the Palestinian Authority is looking to attract investments in the renewable energy sector.

Massader is developing 16.5 MW medium-scale Solar PV Parks in 3 different locations in Palestine, including Jericho plant (7.5 Megawatt MW), Kufr Dan plant in Jenin (5 MW), and Rammun plant in Ramallah (4 MW). The three solar parks are developed using the net metering scheme under the renewable energy law of Palestine.

Massader invests in and leads large-scale strategic projects aimed at developing Palestine's natural resources and infrastructure like Noor Palestine Solar Program.

Noor Palestine Program aims to utilize the existing abundant solar energy resource of Palestine to develop local and clean power generation plants across the country, thus reducing the imported power and supporting the local economy's growth. The Noor Palestine Program entails 2 components: Utility Scale Solar Parks and Solar Rooftops Program.

The Palestinian Solar Initiative: The first phase will include an unprecedented initiative to spread the concepts of solar energy which is called the Palestinian Solar Initiative (PSI). This initiative consists of three phases over a period of three years from the mid-2012 until mid-2015.

The good news is that rooftop solar enjoys a wide array of advantages and can contribute to Palestine's energy needs - from its nature that utilizes the rooftops of existing buildings without demanding land availability to generating electricity, without requiring significant changes to the transmission infrastructure.
