Wherever you reside, we can help you get solar power system panels. Perihelion Solar &#183; August 16, 2021 &#183; Wherever you reside, we can help you get solar power system panels. ...

ESA's Sun-explorer Solar Orbiter reached its first perihelion, the point in its orbit closest to the star, on 15 June 2020, getting as close as 77 million kilometres to the star's surface. Last Update: 30 September 2020

During perihelion, the spacecraft will reach a top speed of 213,200 miles per hour relative to the Sun. This speed and distance will mark new records for both closest solar approach and top heliocentric speed by a spacecraft. At perihelion, Parker Solar Probe will fly through material at about 3.6 million degrees Fahrenheit.
