

Poland is working its way to the top of the European ranks in photovoltaics. In 2020, 2635 megawatts (MW) of solar power output was installed in Poland - more than thrice as much as in 2019 (823MW). This put Poland's PV market in fourth place in Europe, behind Spain (2,7 GW), the Netherlands (2,8 GW) and Germany (4,8 GW).

Out of 41.4 GW of total photovoltaic capacity installed in 2022 almost 5 GW was installed in Poland. This demonstrates the unwavering growth of investment in solar energy in Poland. Only Germany and Spain report a faster photovoltaic industry growth rate.

With the planned 19 GW of new solar projects, Poland could significantly expand its capacities in the coming years and further establish itself as a leading player in the European solar industry. The integration of energy storage will play a key role in ensuring grid stability and maximizing the efficiency of renewable energy.

The largest collection of free solar radiation maps. Download maps of GHI, DNI, and PV output power potential for various countries, continents and regions.

Lately, Poland has demonstrated significant growth in its solar energy capacity, owing to a growing adoption of the technology and corporate demand, helped by favourable policy regimes. As a result, in 2022, Poland emerged as Europe's third-biggest solar market.

Solar energy in Poland includes the production of solar thermal energy and solar photovoltaics. By the end of 2021, there were around 3,000,000 square metres (32,000,000 sq ft) of installed solar thermal collectors which in Poland are primarily used for heating up household water.

Poland's installed solar capacity surged to over 17 GW in 2023, making it the fourth-largest solar market in the European Union with over 1.3 million micro solar installations contributing to the energy mix.

The solar industry in Poland is driven by government incentives, favorable solar conditions, and the country's commitment to renewable energy. With ongoing efforts to promote solar power, Poland is expected to continue its expansion in the solar industry and contribute to its overall energy transition.

Listed below are the five largest upcoming Solar PV power plants by capacity in Poland, according to GlobalData's power plants database. GlobalData uses proprietary data and analytics to provide a complete picture of the global Solar PV power segment.

Poland is now one of the Top 5 solar PV investment markets in Europe. In 2021 alone, the country added around 3.2 GW of solar PV installations. With a cumulative installed solar PV capacity of 7.1 GW at the end

Poland solar places

of 2021, Poland is now a major European solar energy market, with many investors developing large-scale projects far exceeding the 100 ...

The solar industry in Poland is driven by government incentives, favorable solar conditions, and the country's commitment to renewable energy. With ongoing efforts to promote solar power, Poland is expected to continue ...

Solar energy in Poland includes the production of solar thermal energy and solar photovoltaics. By the end of 2021, there were around 3,000,000 square metres (32,000,000 sq ft) of installed solar thermal collectors which in Poland are primarily used for heating up household water. The total solar photovoltaics (PV) grid-connected capacity in Poland was 17,05...
