

Engie Romania announced on Wednesday the launch of its first hybrid power plant, combining wind and solar energy, with a total installed capacity of 57 MW. Located in Gemele commune, Braila county, the facility is expected to generate 140 GWh of electricity annually, sufficient to power over 46,800 households.

Engie Romania has introduced a new hybrid power plant to the transmission grid, marking a significant step in the country's energy transition. The 56.8 MW facility, located in the Gemele commune of Braila County, combines wind turbines and solar power, generating a total of 140 GWh per year.

The hybrid power plant, located in Romania's east, in the Muntenia region, will generate 140 GWh per year, the subsidiary of France-based Engie said. It is equivalent to the electricity needs of 46,800 domestic households. With the new complex on the transmission grid, Engie Romania lifted its capacity in the country to 211 MW.

ENGIE Romania has expanded its renewable energy portfolio by completing its first hybrid plant, combining wind and solar power, with a total installed capacity of 57 MW. Located in Gemele, Braila County, the plant will generate approximately 140 GWh annually, enough to power over 46,800 households.

It would make them one of the first hybrid power plants in Romania. Engie received a green light two months ago for the connection of its planned 535 MW photovoltaic system to the transmission grid. In addition to its other projects in Romania, Israeli firm Shikun Binui is developing wind and solar power projects in Iasi county.

ENGIE Romania expands its renewable energy production portfolio with its first hybrid plant (wind and solar), with a total installed capacity of 57 MW. Located in the commune of Gemele in Braila county, the hybrid plant will generate approximately 140 GWh annually, equivalent to the annual electricity consumption of over 46,800 households.

French utility group Engie SA ( EPA:ENGI ) has inaugurated a 57-MW wind and solar power hybrid facility in Braila county, eastern Romania, the group's Romanian unit announced on Wednesday.

Engie SA has inaugurated a 57-MW hybrid wind and solar facility in Braila County, Romania. The hybrid plant, featuring 17,100 bifacial solar panels on metal trackers, is expected to generate 140 GWh of electricity annually, sufficient for over 46,800 households.

According to our data, at the moment it is the largest operational hybrid wind-photovoltaic park in Romania. It is also the first hybrid park in the Engie Romania portfolio. The total investment from Gemele amounted to 75 million euros, of which 7 million euros now, in the photovoltaic park, and 68 million euros in the last

decade, when the ...

ENGIE Romania adds a new dimension to its renewable energy portfolio with the commissioning of its first hybrid power plant in Gemenele, Braila County. This facility combines wind and solar capacities, with a total output of 57 MW. It comprises an existing 47.5 MW wind farm and a new 9.3 MWp solar farm.
