

# Smart sun power Guernsey

Efficient and environmentally friendly, the use of solar PV or solar panels in Guernsey is on the up. A fantastic investment, they are a great way to reduce your carbon footprint and make your home or property more energy efficient and eco-friendly, whilst also offering a greater financial return than savings in the bank.

Cut your electricity bill from day one and, with the "Smart Export Guarantee", you can sell solar power back to the National Grid (tax free money!) No Upfront Costs. You don't have to fork out £1000s to have solar electricity for your home.

How low can you go? One panel. 300 watts output, simply plug the microinverter into the mains socket. We supply a "VZPV" (Very Easy PV) package that does just that and includes all the paperwork to Guernsey Electricity. Visit our projects page to see our past installations.

It's not just in sunny weather that Solar PV works for you, in all conditions our SunPower panels are designed to work. Contact us today, to discuss how we can help you build your own ...

What are the benefits of using SunPower Solar PV? Best Technology: outperforming, outlasting & outshining Most Reliable & Best Warranty: combining power and product warranty

In Guernsey, south-facing roofs usually generate the most electricity. However, having panels on both the east and west-facing roof space can provide more balanced generation throughout the day by catching both morning and evening sunlight. Objects like trees, chimneys and dormer windows may cast a shadow on your roof during some parts of the day.

5 ???&#0183; In 2023 Guernsey Electricity worked in conjunction with The Little Green Energy Company to install the vast community-scale solar array at Grow Limited's newly redeveloped headquarters. The 310 photovoltaic (PV) panels will produce 129-kilowatt peak power (kWp). That's enough electricity to supply power to approximately 35 homes.

The rather outdated concept by Guernsey Electricity that at 25kW and above an additional charge is made. There are ways around this which include limiting your output to 25kW and topping up batteries, heating up hot water storage, heating central heating buffer ...
