Who owns the Catoca deposit in Angola?

Alrosa, led since May by Pavel Marinychev, holds a 41% share in SMC, created in 1994 to mine the Catoca deposit in Angola's northern province of Lunda Sul. The Angolan state-owned company Endiama also holds a 41% share, with the remaining 18% belonging to Leviev International - LLI (China).

Who owns SMC & Alrosa?

SMC, led by Benedito Manuel and operational since 1997, produces around 8 million carats per annum, representing 75% of Angola's output. Alrosa, led since May by Pavel Marinychev, holds a 41% share in SMC, created in 1994 to mine the Catoca deposit in Angola's northern province of Lunda Sul.

What is the difference between slgc and SMC?

SLGC consists of a new platform that ties into the existing Sanha Condensate complex and new connecting pipelines for gathering and exporting gas from blocks 0 and 14 to Angola LNG through the CRX pipeline. SMC, on the other hand, is a key project to de-bottleneck existing gas infrastructure and to also maximise the use of the CRX's capacity.

What's going on with Angola's diamond industry?

Angola's state diamond company Endiama and RGS Holdings, run by the Gulamo family, close to Mozambican president Nyusi's party, are launching a massive agricultural development project in the Lundas provinces, the bastion of the country's diamond industry.

Can natural gas power Angola?

Angola's electricity supply is dominated by hydroelectric power generating facilities. Natural gas has the potential to make the power grid more stable, reliable and affordable by supplementing this existing power generating capacity.

How has international demand impacted the Angolan diamond sector?

A drop in international demand has heavily impacted the Angolan diamond sector due to its poor traceability. Endiama managing director José Manuel Augusto Ganga Júnior revealed in August that falling diamond prices, by up to 49%, had pushed some of the group's entities to withdraw their production from the market.
